MUKESH S

Software Engineer with Proficiency in Building Scalable Web Applications and RESTful Services

PROJECTS

InfoFeed — A User-Friendly News Submission and Journalist Review Platform

I developed the back-end of a news platform using Spring Boot, where users upload news content that is analyzed and published by journalists. The front-end was built with HTML and CSS, while I focused on creating APIs for user authentication, news uploads, and seamless integration of data processing and storage.

Social Media for Growth

This platform helps users engage effectively with their social media content by allowing them to interact, share posts, and connect with others. In my backend development role, I used Spring Boot to implement systems for managing user accounts, posts, and interactions, ensuring efficient performance and smooth integration with the frontend.

Library Management System

Developed a comprehensive Library Management System using Spring Boot and MySQL. This system allows users to borrow and return books efficiently, with features to track overdue books and calculate fines. Ensured smooth library operations and an enhanced user experience through robust back-end development and database management.

PORTFOLIO

https://mukesh_portfolio.netlify.app

PROGRAMMING SKILL

Java Programming

SpringBoot Framework

ReactJs

SQL

COCURRICULAR ACTIVITIES

Attended several paper presentations

Participated in multiple workshops

CERTIFICATION

Udemy Certified Spring and SpringBoot Framework

Microsoft Certified in Python

I engage in coding pratice on HackerRank

LANGUAGES

English,Tamil
